

T-Lift

Heavy-duty axle lift system

Heavy-Duty Axle Lift System

The T-Lift Axle Lift System is an auxiliary device for trucks and trailers, designed to raise or lower an axle as needed. This system provides significant benefits, including fuel savings, reduced tire wear, and improved maneuverability. When the truck is not fully loaded, the T-Lift system allows for a better turning radius, making it ideal for tight spaces.

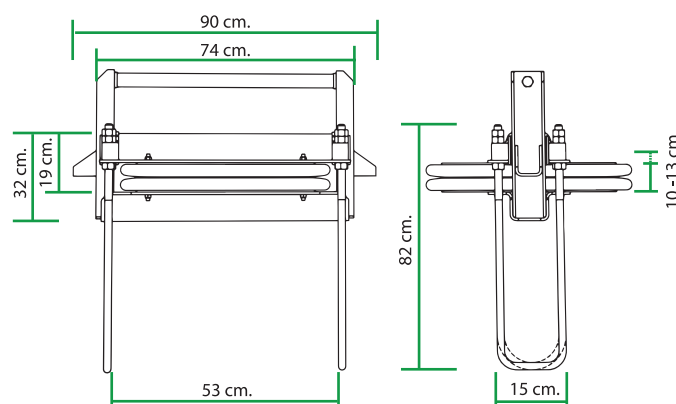

Key Benefits:

- ✓ Reduced Wear: Minimizes wear and tear on the primary axles and chassis components.
- ✓ Improved Maneuverability: Enhances turning and reversing capabilities in confined areas.
- ✓ Extended Component Life: Prolongs the lifespan of wheel bearings and brake pads.
- ✓ Fuel Efficiency: Lifts the axle to reduce friction when the vehicle is running empty or with a partial load, leading to substantial fuel savings.
- ✓ Reduced Tire Wear: Lessens tire friction and stress.

Technical Specifications:

Working Pressure: 8 bar / 116 psi
Net Weight: 100 kg

• Mahachai • Lat Krabang • Laem Chabang • Songkhla • Sadao
