

REEFER CONNECT

Real-time Remote Monitoring for Reefer Containers

Reefer Connect is a powerful device that provides real-time control and monitoring for refrigerated containers. It gives you complete visibility and control over your cold chain logistics, helping to protect your valuable cargo.

What Can You Do with Reefer Connect?

– Real-time Control: Remotely control your container's system and perform Pre-Trip Inspections (PTI) through the platform.

– Data Logging: View real-time operational data and access historical records for full transparency and analysis.

– Risk Reduction: Minimize the risk of damage or spoilage to your refrigerated goods.

– Temperature Management: Instantly adjust temperature settings and receive alerts if the temperature falls out of range or if the unit encounters a problem.

– Precise Tracking: Get the exact location of your container in real time, with notifications when it arrives at its destination.

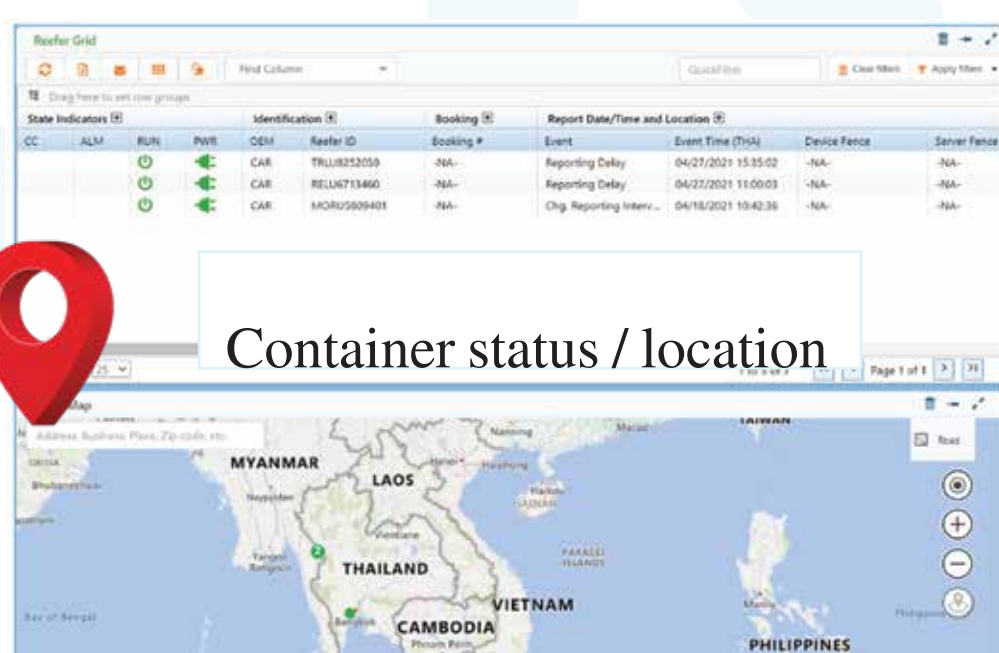

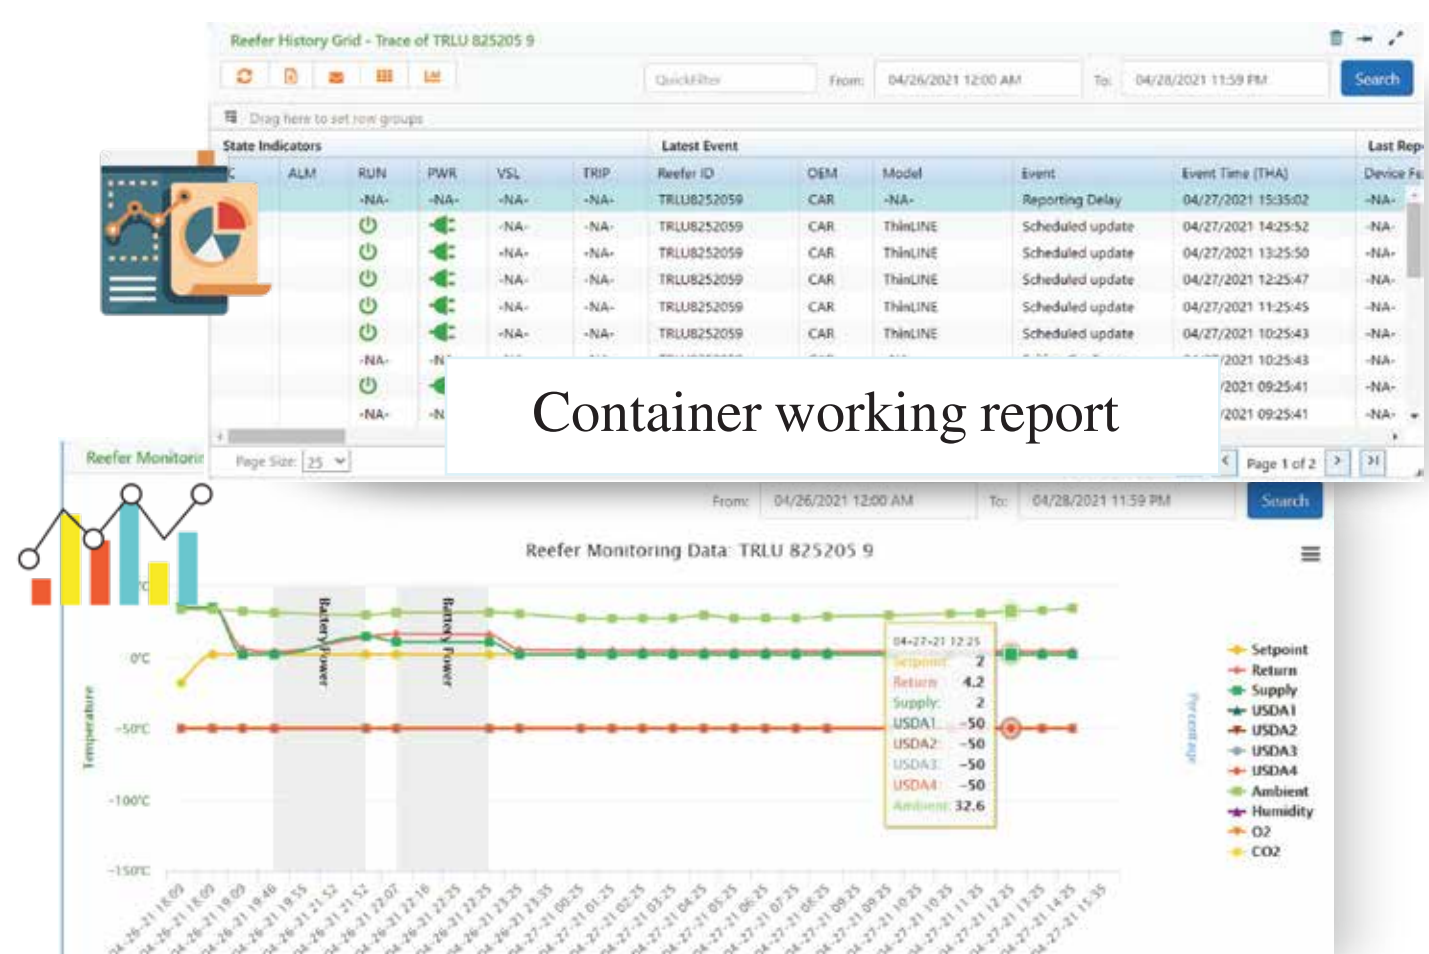

– Cost and Time Savings: Reduce operational costs and save valuable time by managing your containers remotely.

Customizable Alerts for Critical Events:

Stay informed with instant notifications for key events, including when a container leaves or arrives at a location, when a unit has a problem, or when the temperature changes.
