STEELBRO

CONTAINER HANDLING SOLUTIONS

The Bridge Leg is an optional stabiliser for the SB362 sidelifter model. Choose the sidelifter leg configuration to suit your operation.

SB362 with bridge and tilt/extend leg combination

Operational Flexibility

This versatile combination delivers the best of both worlds. It allows typical, everyday sidelifter operations without limitations, combining the benefits of bridge leg stability with tilt and extend leg flexibility.

SB362 with two bridge legs

Delivers supreme stability

The two bridge leg option has been specially engineered to offer supreme stability during the lifting process. This option allows for rapid transfers from trailer to trailer - effective in improving operational times. A massive outreach of over 4.6 metres allows speedy transfers to and from companion vehicles and rail wagons.

SB362 Bridge Leg

Transfers of single 20' containers

From a companion trailer carrying two closely spaced containers are possible using the STEELBRO bridge/tilt and extend combination.

Operates safely in tight situations where space is limited.

The Bridge Leg can be safely deployed in a kneeling configuration onto a companion deck using sensors positioned to ensure stability and allow a safe lift.

Proven Dependability

The STEELBRO sidelifter has a robust construction and reliable design.

Maximise yard space

Two hi-cube containers are easily double stacked with both bridge leg configurations.

Move more containers quickly and efficiently

The STEELBRO Bridge Leg safely deploys quicker than other units on the market resulting in faster turnaround times.
